

Hussein Asaad

Marine Engineer | Builder of RO Systems & PDE Solvers | Bridging Mechanics, Code & CFD | STCW Certified | Based in UAE
Sharjah, Sharjah Emirate, United Arab Emirates

Summary

I'm a Marine Engineer with hands-on experience in mechanical system assembly, maintenance, and documentation — including reverse osmosis watermakers and high-pressure washers built at Seablue Marine Services S.P.S. L.L.C.

Beyond the workshop, I bridge engineering with programming. I'm currently developing PDEWorkbench — a desktop application for solving partial differential equations using custom-generated finite difference formulas. It's my way of turning theory into action.

Certified in STCW safety and security training, I'm also expanding my capabilities through a course in Computational Fluid Dynamics (CFD). I thrive in roles where real-world machinery meets math, code, and purpose.

Core Skills:

Marine & mechanical system assembly

Technical documentation (manuals, brochures)

C# programming, numerical methods, Math.NET

LaTeX rendering (WpfMath), WinForms UI

STCW & ISPS compliance

Currently based in the UAE — open to marine, mechanical, or engineering software roles. Ready to contribute with grit, adaptability, and creative engineering thinking.

High-Pressure Pumps

Reverse Osmosis Systems

Maintenance Planning

Experience

Seablue Marine Services Workshop

Operations Manager

June 2023 - December 2025 (2 years 7 months)

Manufacturing and assembly of Reverse Osmosis (RO) freshwater generators and high-pressure machines for marine applications, ensuring adherence to quality and safety standards:

- Gained hands-on experience with specialized tools and diagnostic equipment for marine engine maintenance and RO system manufacturing.
- Ensured workshop safety by following standard operating procedures and safety protocols, contributing to a secure and efficient work environment.
- Maintenance & repair of High pressure & low-pressure pumps used in the RO plants
- Fully supervise material acquisition needed for manufacturing, assembly, production, and hand participating in the process
- Inventory management: ensuring that inventory is organized and no [non-stock] items situations happen, ensuring all material needed for manufacturing is available in our workshop, from frame building material, SS bars and tubes, Sheets, passing by Pressure Switches, fittings, Control panel equipment, Sensors, pump units and RO membranes and housing, etc
- Coordinating with port authorities and ships agents to ensure smooth product shipping and delivery to the target ships
- Answering inquiries about the products for both RO Water-Maker Devices and High-Pressure Water-Gun Washing Machines which we manufacture in our workshop

Education

Tishreen University

Bachelor of Engineering - BE, Naval Architecture and Marine Engineering · (January 2022)
